OMRON

NC Integrated Controller

Machine Automation Controller NJ/NY Series

SYSMAC

NC Integrated Controller brings further developm of multi-purpose processing machines

Technological advancements and changes in consumer needs are making products more diverse and complex. Manufacturers are dealing with a greater variety of shapes and materials while also striving to achieve the high productivity rates necessary to stay in competitive.

To help manufacturers overcome today's challenges as well as those of the near future, Omron offers a solution that maximizes the throughput of multi-purpose machines designed to handle multiple processes.

Our NC Integrated Controller provides three key benefits:

NC and PLC functionality fully synchronized at high speed	Minimize machine cycle time
Versatile NC functions	Simplify complex profiling
One software for NC setting and PLC programming	Optimize engineering time

Experience new manufacturing with the NJ/NY NC Integrated Controller at the heart.

Sysmac Automation Platform

NJ/NY Series NC Integrated Controller

ent

Minimize machine cycle time

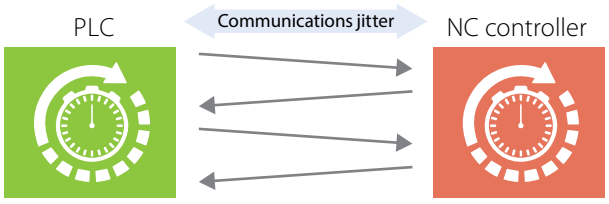
NC and PLC functionality fully synchronized at high speed

Efficient control of processing and other processes is crucial to performance and productivity of a multi-purpose machine which handles multiple processes. The NC Integrated Controller provides both NC and PLC functionality and synchronize all devices at high speed, significantly reducing the machine cycle time.

Improved synchronization

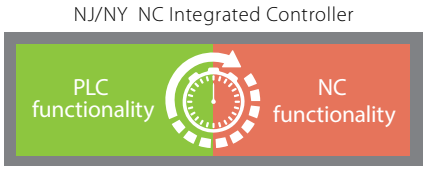
Conventional system PLC+NC

As CPU control cycles are not synchronized, communication jitter occurs

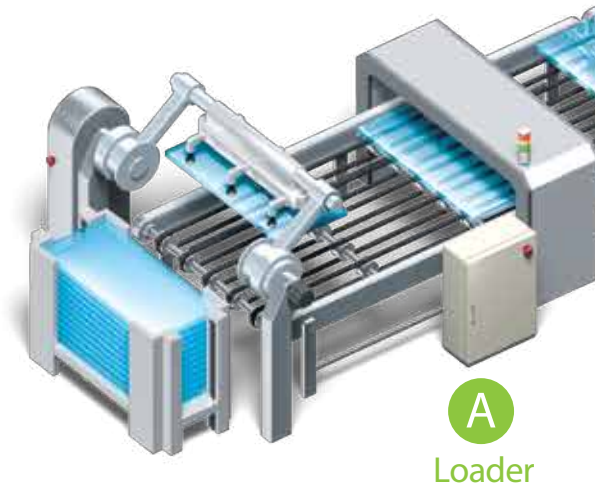


NC Integrated Controller

NC functionality and PLC functionality are fully synchronized in the same task period



PATENT PENDING

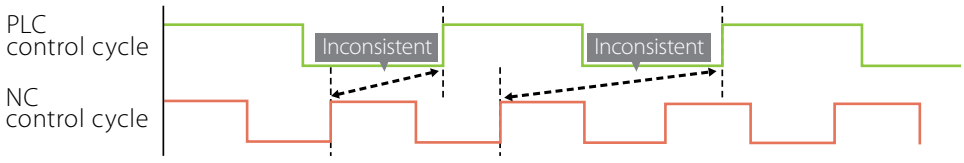


Control cycle as you designed

Programs for both PLC and NC are executed in the same task period, allowing both processes to be synchronized together within one cycle as you would expect from this unique controller.

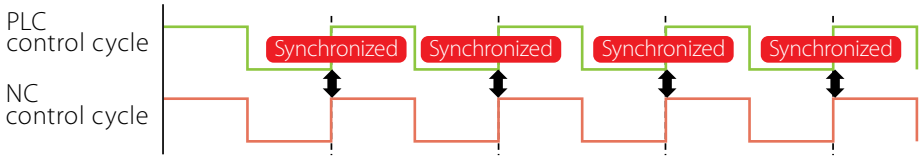
Conventional system

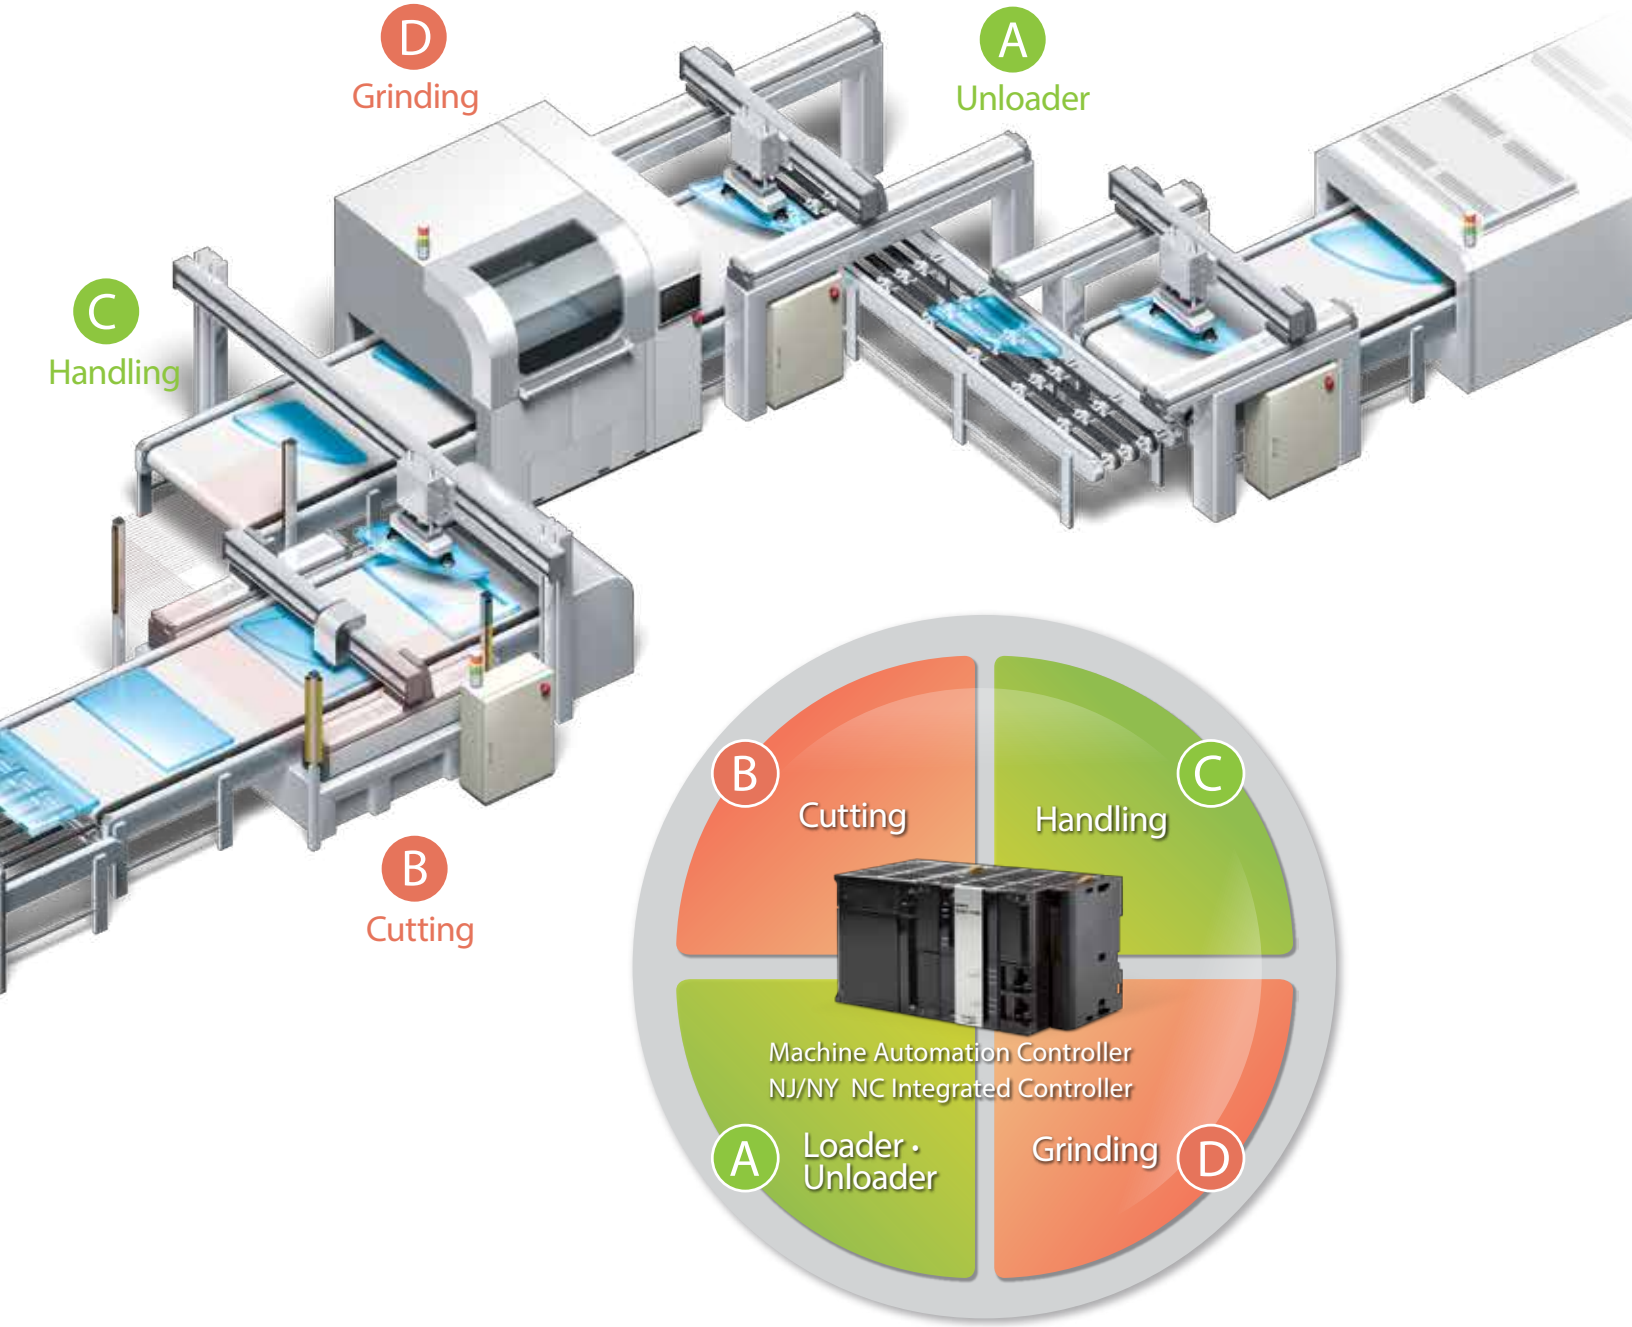
Two control cycles are inconsistent (Communications jitter must be taken into consideration)



NC Integrated Controller

Two control cycles are fully synchronized



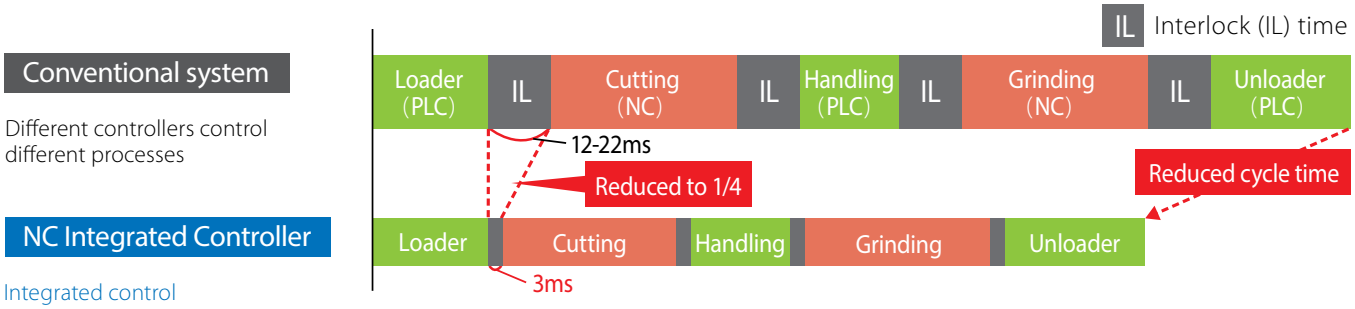


High-speed synchronization reduces interlock time

Interlock time between NC (processing) and PLC (other processes) will be reduced to 1/4* as compared to when separate controllers are used. Cycle time of a multi-purpose machine that generates many interlocks can be reduced.

PATENT PENDING

*The NY Series is used under our measurement conditions.



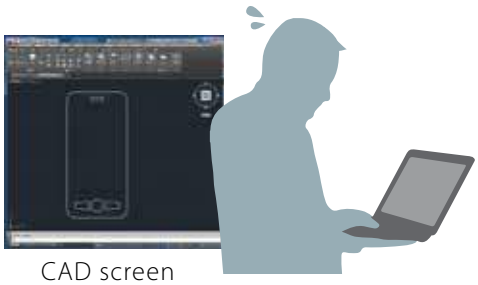
Simplify complex profiling

Versatile NC functions

G-Code reduces time required to design and program complex profiling.

Conventional controller

Processing programs are designed based on CAD data. Programming using PLC instructions and debugging are required for each figure.



CAD screen (example)

Program design

- Exploding components into lines
- Types of lines: straight line, arc, free curve
- Target positions of lines
- Travel velocities
- Transition path between figures, etc.

NC Integrated Controller

NC functions for complex profiling applications

G-Code
G-Code NC programming language allows manual programming on operation software and use in combination with any CAD/CAM software.

High-speed control
Logic sequence, motion control and NC functionality with the fastest cycle time of 500 µs.

Cutter compensation 2D
Tool diameter and shape compensation, matching the cutting point exactly as specified in G-Code.

Lookahead
Future instructions are analyzed in advance, movements are blended and optimized in speed and acceleration for a better performance.

Block Retrace
Path can be reverted in order to remove the tool from cutting area.

Compensation
High-precision processing by compensating position of NC motors.

3D interpolation
Helical, spiral and conical interpolation for 3D profiling.

Coordinate systems
Various profiling using machine coordinate system, workpiece coordinate system, and local coordinate system.

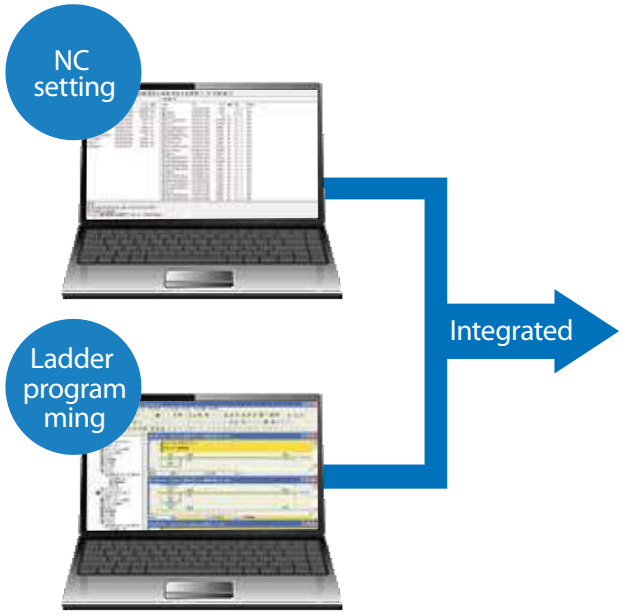
Optimize engineering time

One software for NC setting and PLC programming

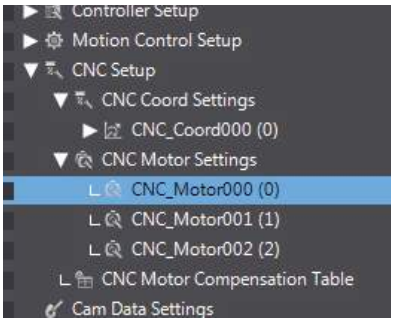
The Sysmac Studio provides a true Integrated Development Environment (IDE) for configuration, programming, monitoring, and 3D simulations. Programming based on IEC standard and PLCopen® Function Blocks (FBs) for motion control cuts programming time. FBs for NC control make program structure simple, even for synchronization between NC process and others.



Integrated Development Environment
Sysmac Studio

Intuitive user interface reduces configuration time

Easy to find NC settings



Parameter setting by device

Description with graphics gives parameter details

A choice of two controllers

For specific purpose machines

A modular controller suitable for machines programmed for NC

- Combine with general-purpose HMI and your own PLC
- Traditional reliability and robustness
- Up to 16 synchronous axes, including NC processing and motion control

Machine Automation Controller
NJ NC Integrated Controller

For general purpose machines

A panel PC provides general-purpose HMI functionality that allows machine users to edit NC programs

Industrial Panel PC
NY NC Integrated Controller

- Reliable and robust industrial panel PC
- Omron's unique CNC Operator for editing NC programs and performing functions
- Comes equipped with Windows OS, running Windows applications while performing motion control
- Up to 32 synchronous axes, including NC processing and motion control
- Intel® Core™ i7-4700EQ processor

Graphic user interface for NC - CNC Operator

Operation software for PC to use NC functionality.

Customizable software allows adding functionality by users (Requires Microsoft Visual Studio).

Total solution to maximize machine throughput

Integration and functionality

Sysmac is an integrated automation platform dedicated to providing complete control and management of your automation plant. At the core of this platform, the controller series offers synchronous control of all machine devices and advanced functionality. This multidisciplinary concept allows you to simplify solution architecture, reduce programming and optimize productivity.

✓**Integrated machine controller**

Logic sequence, motion, safety, I/O, vision, and NC in one. One integrated controller offers speed, flexibility and scalability of software centric architecture without compromising on the traditional reliability and robustness that you have come to expect from Omron PLCs.

✓**Perfect match between fast machine control and plant data management.**

Built-in ports: Machine control network EtherCAT® and factory automation network EtherNet/IP™. The two networks with one connection purpose is the perfect match between fast real-time machine control and plant data management.

✓**A wide range of products for complete production line**

Our industry-leading lineup: Input (photoelectric/proximity/vision sensors, switches), Logic (PLCs, controllers), Output (servo systems, inverters, relays), and Safety.

MACHINE CONTROLLER

15.4' inch

12.1' inch

Product name		NJ/NY series NC Integrated Controller				
Model		NY532-5400-□				NJ501-5300
Hardware		Industrial Panel PC				Modular controller
Display		15.4' inch		12.1' inch		-
Storage		128 GB SSD MLC	64 GB SSD SLC	128 GB SSD MLC	64 GB SSD SLC	-
Operating system		Windows Embedded Standard 7 – 64 bit				-
Task		Multi-tasking program				
Control functionality		• Logic sequence • Motion • NC				
Number of axes	Max. synchronous axis	32				16
	Synchronous axes per channel	4				
	Number of channels	8				4
Fastest cycle time		500 µs				
Software tool	Integrated Development Environment	Sysmac Studio: • Ladder, Structured Text, In-Line ST • IEC61131-3 • PLCopen for Motion Control and Safety • G/M Code				
	Graphic user interface	CNC operator: • G/M Code				
Interpolation functions	Compensation	Tool Radius/Length, Cross, LeadScrew				
	Interpolation	Linear, Circular, Helical, Conical, Spiral				
	Coordinate system	MCS, WCS, LCS, Mirror, Scaling, Rotation, Plane Selection…				
	Others	FeedRate Control, Accel/Decel Control,Lookahead, Machine Lock, Dry Run, Back Trace…				
Program capacity		40 MB				20 MB
NC program buffer		64 MB				20 MB
Memory card		SD and SDHC				
Built-in port		Ethernet, EtherNet/IP, EtherCAT, USB 3.0/2.0, DVI,RS-232C				EtherNet/IP, EtherCAT, USB
EtherCAT slaves		192				
Mounting		On panel				DIN rail
Global standards		EU Directives, cULus, RCM and KC Registration				

SOFTWARE

	Integrated Development Environment	Operation Software	
			
Product name	**Sysmac Studio**	**CNC Operator License***	**CNC Operator Software Development Kit**
Model	**SYSMAC-SE2□□□**	**SYSMAC-RTNC0001L**	**SYSMAC-RTNC0101D**
Functions	• Sysmac Studio is the Integrated Development Environment to configure, program and maintain all Sysmac Controllers and devices. • One single project file for the entire machine. • Intuitive IDE for logic, motion, safety, robotics, drives, vision, HMI and networks NC. • Reduce engineering and maintenance costs by using Omron libraries and IAGs. Develop your own libraries. • IEC-61131-3 compliant. • PLCopen FBs for motion and safety. • G/M Code available • Advanced functions for CAM editing, Drive tuning, 3D simulation, libraries and namespaces, vision algorithms, HMI design and complete machine maintenance. • Full Digital Machine development environment including: EtherNet/IP, EtherCAT, IO-Link, SQL and FTP. • Offline Simulation for logic, motion, robotics, safety and vision. • Advanced security function with 32 digit security password.	• G-Code File Editor • Execution monitor Active G/M code display • Command terminal • Jogging, homing	• The CNC Operator Software Development Kit provides a • Environment for customization of CNC Operator.

*One CNC Operator License (SYSMAC-RTNC0001L) is bundled with a CPU Unit. Purchase additional licenses if required.
