Unaffected by color or material, 2 m (6.562 ft) distance adjustable range reflective sensing

Hardly affected by object color or background

As the **EQ-30** series is incorporated with a 2-segment photodiode as the receiving element with a unique circuitry, it detects an object at the same distance regardless of its color or the background beyond the adjusted sensing range.

(However, when the background is specular, it may be necessary to change the angle of the sensor.)

Long sensing range 2 m 6.562 ft

The **EQ-30** series can detect an object 2 m 6.562 ft away.

It is suitable for various applications, such as, sensing objects or positioning objects traveling on a wide assembly line, etc.

[**EQ-34**: Correlation between material (200 × 200 mm 7.874 × 7.874 in) and sensing range (typical)]

Two distances (far and near) can be set **EQ-34W**

With **EQ-34W**, two sensing distances, Far (Main) and Near (Sub), can be set. Hence, one sensor can suffice where, earlier, two were required.

NOTICE: EQ-34W & EQ-34W-C5 part numbers are discontinued as of Sept. 29, 2017. All other part numbers remain available to order.

ENVIRONMENTAL RESISTANCE**Insusceptible to contamination on lens**

The fixed-focus sensing keeps the detectability better than diffuse reflective type sensors even if the lens is contaminated by dirt, dust, mist, or smoke under an unclean environment.

**Waterproof**

It has IP67 protection. It can be used in places splashed with water.

Note: However, take care that if it is exposed to water splashes during operation, it may detect a water drop itself.

Principle of adjustable range reflective sensing with 2-segment photodiode

Normal reflective type sensors operate by sensing the variation in the amount of incident beam. However, the adjustable range reflective sensing type sensor incorporating the 2-segment photodiode operates by sensing the variation in the incident beam angle. Thus, the output is activated according to the distance of the object from the sensor. This system helps the **EQ-30** series in being unaffected by object color or a background, enabling stable sensing.

Sensing is based on the difference in the incident beam angle of the dotted line and the solid line in the above figure.

OPERABILITY**Mechanical 2-turn adjuster with indicator**

It features a mechanical 2-turn distance adjuster with an indicator that shows the set distance at a glance.

**MOUNTING / SIZE****Compact**

It saves space, since a miniaturized housing of $W20 \times H68 \times D40$ mm **W0.787 × H2.677 × D1.575 in** has been designed for the adjustable range reflective sensing sensor even though the adjustable sensing range is 2 m **6.562 ft** long.

**VARIETIES****Plug-in connector type is available**

Plug-in connector type, which can be easily disconnected for replacement is available. In case a problem occurs, anyone can replace the sensor in a minute. (Excluding **EQ-34W**)

ORDER GUIDE

Type	Appearance	Adjustable range (Note)	Model No.	Output
NPN output		 0.2 to 2 m 0.656 to 6.562 ft	EQ-34	NPN open-collector transistor
PNP output			EQ-34-PN	PNP open-collector transistor
Two outputs			EQ-34W	Two NPN open-collector transistor outputs Discontinued as of Sept. 29, 2017

NOTE: Mounting bracket is not supplied with the sensor. Please select from the range of optional sensor mounting brackets (two types).

Note: The adjustable range stands for the maximum sensing range which can be set with the adjuster.
The sensor can detect an object 0.1 m 0.328 ft, or more, away.
However, the detectable range of Near (Sub) type of **EQ-34W** begins at 0.2 m 0.656 ft.

**Plug-in connector type (Not available for EQ-34W)**

Plug-in connector type (standard: cable type) is also available. (excluding **EQ-34W**)
When ordering this type, suffix "-J" to the model No.
Please order the suitable mating cable separately.
Model No.: **EQ-34-J**, **EQ-34-PN-J**

Material	Enclosure: Polyallylate and Polyethylene terephthalate, Lens: Polyallylate		
Cable	0.3 mm ² 3-core (EQ-34W: 4-core) cabtyre cable, 2 m 6.562 ft long		
Cable extension	Extension up to total 100 m 328.084 ft is possible with 0.3 mm ² , or more, cable.		
Weight	Net weight: 150 g approx., Gross weight: 200 g approx.		
Accessory	Adjusting screwdriver: 1 pc.		

Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +23 °C **+73.4 °F**.

- 2) The adjustable range stands for the maximum sensing range which can be set with the adjuster. The sensor can detect an object 0.1 m **0.328 ft**, or more, away. However, the detectable area of the Near (Sub) type of the **EQ-34W** begins at 0.2 m **0.656 ft**.

- 4) Refer to "Stability Indicator (p.361)" of "PRECAUTIONS FOR PROPER USE" for details of the stability indicator.

- 3) The Near (Sub) distance adjustable range, L₂, changes with the setting of the Far (Main) distance, L₁, as shown in the table below.

- 5) Detection may become unstable depending on the setting conditions or the sensing objects. After setting up this product, make sure to check operations using actual sensing objects.

PRECAUTIONS FOR PROPER USE

Refer to p.1458~ for general precautions.

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Stability indicator

- Since the **EQ-30** series uses a 2-segment photodiode as its receiving element, and sensing is done based on the difference in the incident beam angle of the reflected beam from the sensing object, the output and the operation indicator operate according to the object distance. Further, the stability indicator shows the margin of the incident light intensity and not that of the object distance. Hence, the distance at which it lights up/off depends on the object reflectivity and is not at all related to the output operation. Do not use the sensor when the stability indicator is off (unstable light received condition), since the sensing will be unstable.

**Others**

- Do not use during the initial transient time (50 ms) after the power supply is switched on.
- When connecting the mating cable to the plug-in connector type, the tightening torque should be 0.4 N·m or less.

Mounting

- The tightening torque should be 0.8 N·m or less.

- Care must be taken regarding the sensor mounting direction with respect to the object's direction of movement.

- When detecting a specular object (aluminum or copper foil) or an object having a glossy surface or coating, please take care that there are cases when the object may not be detected due to a small change in angle, wrinkles on the object surface, etc.
- When a specular body is present below the sensor, use the sensor by tilting it slightly upwards to avoid wrong operation.

- If a specular body is present in the background, wrong operation may be caused due to a small change in the angle of the background body. In that case, install the sensor at an inclination and confirm the operation with the actual sensing object.
- Take care that some objects may produce a dead zone right (less than 0.1 m 0.328 ft) in front of the sensor.
